EDUCATION

York University, Toronto, ON — Graduating May 2028
Bachelor of Science, Statistics
- **GPA:** 3.8/4.0
- **Awards:** 2nd Place – Elevate Case Competition (2026), Top 5 – National Case Competition (attended by Western, UofT, UBC, McGill (2026), Onyx Scholar (2026), Continuing Student Scholarship (2025), Provost's Award (2024)
- **Relevant Coursework:** Statistics – A, Data Analytics – A+, Survey Design – A+
- **Technical Skills:** Python (Pandas, Matplotlib, scikit-learn), SQL, Tableau, PowerPoint, Excel, GitHub, AB Testing

PROFESSIONAL EXPERIENCE

k2i academy, Toronto, ON — May – August 2026
Program Mentor
- Designed and led 20 hands-on engineering and physics activities for high school students as part of STEM outreach, making technical concepts fun, engaging and easy to understand through real-world applications.
- Developed documentation covering 100+ sensors, detailing functionality, compatibility, and coding requirements, enabling future mentors to quickly select equipment and focus on activity design, feasibility, and student impact.

Riipen Level Up, Remote — March – May 2026
B2B Market Research Analyst
- Synthesized research from company websites, Cloudtango, and LinkedIn into a CRM-ready database, standardizing service, and customer information to support targeted outreach across 200 Managed Service Providers (MSPs).
- Screened 200 Canadian MSPs against service and customer-segment criteria, narrowing the market to 124 priority partners aligned with the employer's expansion and partnership objectives.

PROJECT EXPERIENCE

Quantifying Sales Uplift With Causal Impact Analysis | Link to project — April 2026
- Quantified Delivery Club's causal sales impact using Causal Impact Analysis across 3 months pre- and post-launch, estimating a statistically significant 41.1% sales uplift for members versus a modelled $121 daily counterfactual.
- Estimated an average daily incremental sales effect of $49.92 (95% confidence interval: $41.56 – $58.54), evaluating the campaign's impact against predicted sales in the absence of the intervention while accounting for uncertainty.

Predicting Customer Loyalty Using Machine Learning | Link to project — Feb 2026
- Integrated 3 customer data sources using Python and pandas, engineering behavioral features, and creating analysis-ready datasets to predict missing loyalty scores and support data-driven customer insights.
- Analyzed feature importance across 3 regression models to identify distance from store as the strongest predictor of customer loyalty, uncovering a location-based insight to inform customer segmentation and data-driven marketing.

Assessing Campaign Performance Using Chi-Square Test for Independence | Link to project — Nov 2025
- Evaluated Delivery Club campaign performance across 2 mailer variants, comparing 32.8% vs. 37.8% signup rates and applying a Chi-Square test to assess whether higher-cost outreach generated a statistically significant lift.
- Challenged a potential increase in marketing spend by demonstrating that the 5.0pp signup-rate difference between low- and high-cost mailers was not statistically significant (p=0.16 vs. 0.05 threshold).

EXTRACURRICULAR ACTIVITIES

Marketing Executive, Data Science Club, York University — September 2026 – Present
- Engaged 30+ students through campus outreach to promote membership, events and awareness of data science trends.

Director of Outreach, Business Technology Association, York University — September 2026 – Present
- Cultivating relationships with 7 business and technology professionals to support future panel discussion opportunities.

Orientation Leader, Bethune College — August – September 2026
- Welcomed 70+ incoming students during Frosh, connecting them with academic, wellness, and recreation resources.
